GREETINGS TO FLOWER LOVERS

It is with great pleasure I present this, my latest catalogue to Dahlia and Gladioli lovers, and wish to thank you all for the liberal patronage I received during the past year and also the many interesting letters received telling of the many prizes won. It is my desire to offer you only those varieties that I believe to have superior merit, as we are continually striving to improve these wonderful flowers by adding such novelties each year that show promise of a future.

EDGAR W DARLING.

Order Early. It is well to order early as the demand for some of the finer sorts often exceeds the supply, as in the case of so many orders having been booked at the fall shows.

Guarantee. I guarantee the tubers and plants I send out true to name, and to arrive in good growing condition. I cheerfully replace any that should prove otherwise; kindly notify me at once. We do not substitute unless requested. Although we are very careful in packing, we do not guarantee tubers against freezing if sent before April first.

Terms. Cash with order or in advance of shipment.

HOW TO GROW EXHIBITION BLOOMS.

There is no mystery about growing exhibition Dahlias. If large blooms are wanted for the Fall shows do not plant too early. Prepare the soil thoroughly by digging 12 to 18 inches deep. After this dig holes five inches deep and from three to four feet apart. Always lay the tuber flat on its side, the size of which makes no difference as long as it has one strong eye or sprout. Cover about three inches, leaving the rest to be filled in after the plant comes up. If more than one sprout comes up remove all but the strongest. When plant is large enough pinch out the top just above the second or third set of leaves, which causes the plant to branch. Only allow four or six

branches to grow. When buds appear remove all but the terminal bud. If this is imperfect, choose another, and cut out all side shoots on each stem above the second set of leaves, being sure to leave the sprouts near the base of each stem for the next crop of blooms. The most important thing is cultivating and do not allow the ground to become too dry.

GREEN PLANTS.

I strongly recommend green plants such as I send out. They will produce larger and finer blossoms than tubers, and are less liable to become diseased. I have received many fine reports on the plants sent out last spring, and there is a big demand for them for next spring delivery.
